Welcome!
Let's get started by installing the needed CLIs, setting up your first private registry namespace, and pushing your first image.
Install, Set Up, and Log In
1. Install the IBM Cloud CLI.
2. Install the Docker CLI.
3. Install the Container Registry plug-in.
ibmcloud plugin install container-registry -r 'IBM Cloud'
4. Log in to your IBM Cloud account.
ibmcloud login -a https://cloud.ibm.com

IBM Cloud Command Line Interface - InstallShield Wizard
Welcome to the InstallShield Wizard for IBM Cloud Command Line Interface
The InstallShield(R) Wizard will install IBM Cloud Command Line Interface on your computer. To continue, click Next.
After the installation is complete, you can get started by opening a command prompt and entering "ibmcloud".
For usage and a list of available commands, enter "ibmcloud help".
To get help on a particular command, enter "ibmcloud <command_name> --help".
For example:
ibmcloud login --help

IBM Cloud Command Line Interface - InstallShield Wizard
The installation completed successfully
To get started, open a terminal window and enter "ibmcloud help". Refer to http://ibm.biz/cli-auto-completion if you want to enable auto-completion for zsh or bash.
IBM Cloud Command Line Interface has a plug-in framework to extend its capability. To install recommended plug-ins and dependencies, run the install script from http://ibm.biz/install-cli. For additional plug-in details, see http://ibm.biz/install-cli-plugin.
Starting from version 1.0.0, IBM Cloud CLI no longer bundles the Cloud Foundry CLI by default. To run Cloud Foundry commands via the IBM Cloud CLI, you need to install the Cloud Foundry CLI through "ibmcloud cf install" command.
Show the Windows Installer log
